

CSC 261
Lab 5: Propositional Logic

Due: 2/28/18

Problem 3: The solutions of Part 3

(a) The propositional knowledge base represented by unicorn-kb is:

$$\begin{aligned} \text{Mythical} &\implies \neg \text{Mortal} & (1) \\ \neg \text{Mythical} &\implies (\text{Mortal} \wedge \text{Mammal}) & (2) \\ (\neg \text{Mortal} \vee \text{Mammal}) &\implies \text{Horned} & (3) \\ \text{Horned} &\implies \text{Magical} & (4) \end{aligned}$$

To rewrite the propositional knowledge base represented by unicorn-kb in CNF, we should apply bidirectional elimination. Since there is no bidirectional implication in the kb, we should then eliminate implications and get:

$$\begin{aligned} \neg \text{Mythical} \vee \neg \text{Mortal} & (5) \\ \neg(\neg \text{Mythical}) \vee (\text{Mortal} \wedge \text{Mammal}) & (6) \\ \neg(\neg \text{Mortal} \vee \text{Mammal}) \vee \text{Horned} & (7) \\ \neg \text{Magical} \vee \text{Horned} & (8) \end{aligned}$$

Next, we should move negation to literals and get:

$$\begin{aligned} \neg \text{Mythical} \vee \neg \text{Mortal} & (9) \\ \text{Mythical} \vee (\text{Mortal} \wedge \text{Mammal}) & (10) \\ (\text{Mortal} \wedge \neg \text{Mammal}) \vee \text{Horned} & (11) \\ \neg \text{Horned} \vee \text{Magical} & (12) \end{aligned}$$

At last, we would distribute disjunction over conjunction:

$$\begin{aligned} \neg \text{Mythical} \vee \neg \text{Mortal} & (13) \\ (\text{Mythical} \vee \text{Mortal}) \wedge (\text{Mythical} \vee \text{Mammal}) & (14) \\ (\text{Mortal} \vee \text{Horned}) \wedge (\neg \text{Mammal} \vee \text{Horned}) & (15) \\ \neg \text{Horned} \vee \text{Magical} & (16) \end{aligned}$$

We now have CNF that : $(\neg \text{Mythical} \vee \neg \text{Mortal}) \wedge (\text{Mythical} \vee \text{Mortal}) \wedge (\text{Mythical} \vee \text{Mammal}) \wedge (\text{Mortal} \vee \text{Horned}) \wedge (\neg \text{Mammal} \vee \text{Horned}) \wedge (\neg \text{Horned} \vee \text{Magical})$

(b) Suppose the α that we want to prove is Horned

To show that $KB \models \alpha$, we show that $(KB \wedge \neg\alpha)$ is unsatisfiable, so we have an assumption: $\neg\text{Horned}$. We do this by proving a contradiction.

Now the Knowledge base that we have:

$$\neg\text{Mythical} \vee \neg\text{Mortal} \quad (17)$$

$$\text{Mythical} \vee \text{Mortal} \quad (18)$$

$$\text{Mythical} \vee \text{Mammal} \quad (19)$$

$$\text{Mortal} \vee \text{Horned} \quad (20)$$

$$\neg\text{Mammal} \vee \text{Horned} \quad (21)$$

$$\neg\text{Horned} \vee \text{Magical} \quad (22)$$

$$\neg\text{Horned} \quad (23)$$

$$\text{Resolve}(23)\text{and}(20) : \text{Mortal} \quad (24)$$

$$\text{Resolve}(23)\text{and}(21) : \neg\text{Mammal} \quad (25)$$

$$\text{Resolve}(25)\text{and}(19) : \text{Mythical} \quad (26)$$

$$\text{Resolve}(17)\text{and}(24) : \neg\text{Mythical} \quad (27)$$

Since two clauses, (26) and (27) resolve to yield the empty clause, we can conclude that KB entails α ; Thus, we prove that the unicorn is horned.
